

PROBLEM STATEMENT

TEAM ID	SWTID-2026-4300
PROJECT NAME	“Sports Hall Booking System”

The **Sports Hall Booking System** will streamline the reservation, scheduling, and management of sports halls within an organization or educational institution. Users will be able to view available sports facilities, book preferred time slots, and track the status of their reservations through an intuitive ServiceNow portal, while administrators can manage the complete booking lifecycle, from request submission to approval, modification, cancellation, and completion. The system will automate booking approvals, prevent scheduling conflicts, maintain accurate booking records, and generate real-time reports on hall utilization and user activity. Automated notifications and reminders will be sent for booking confirmations, cancellations, and upcoming reservations, ensuring smooth communication and efficient facility management. By centralizing the sports hall booking process, the platform will improve operational efficiency, maximize facility utilization, reduce manual administrative work, and support informed decision-making through real-time analytics and reporting.

What are challenges faced without “Sports Hall Booking System”:

- Difficulty in managing sports hall reservations efficiently.
- Increased chances of double bookings and scheduling conflicts.
- No automated notifications for booking confirmations, cancellations, or reminders.
- Poor visibility into sports hall availability, booking status, and facility utilization.
- Challenges in generating reports for booking history, hall usage, and administrative planning.

OBJECTIVE:

Automate the reservation, scheduling, and management of sports halls by providing real-time updates on hall availability, booking status, and time slot allocation. Enable users to book sports facilities through a self-service portal, notify administrators and

users about booking confirmations, cancellations, and schedule changes, and prevent double bookings through automated validation. Generate real-time reports and analytics on hall utilization, booking trends, and user activity to optimize facility management, improve resource utilization, and support informed decision-making.
